

SURE-LOC™

Pilot Program

Serio-US® Lock is willing to invest time and product to help you develop evidence through structured, measurable testing that the Sure-Loc™ will solve your organics and other waste stream diversion challenges.

A recent example of a successful pilot :

In Indian River County, Florida, contamination in recycling containers in unmanned parks was undermining their diversion program and forcing the county to send the contents of the recycling containers to the landfill. Initially, the county tried signage and education to combat the contamination problem, but park visitors did not respond to those efforts alone. The county then did a pilot program to see if securing their carts with the Sure-Loc™ would make a difference. They also cut smaller holes in the top of the container, and added more prominent signage, clearly depicting what should be put in the recycling carts.

Results:

Before the pilot : Contamination from 10-90% of the cart contents

After the pilot : Contamination rates went to almost zero.

If you are interested in doing a similar test, Serio-US® Lock will assist by providing :

Product

up to an agreed upon amount.

Installation Assistance

mounting tool and technical support with our engineer— either live (virtual) or by pre-recorded video.

Assistance Designing Communications Materials

to help you explain to your residents the benefits of securing the waste stream.

What do you provide?

Identify the type of issue you need to address

- see different types of pilots below.

Commitment to:

- Implement the pilot within a reasonable timeframe
- Share pilot results
- Agree to roll out strategies once the pilot's success is confirmed.
- Present information on the pilot's success and rollout strategies to secure management approval (Serio-US® Lock senior personnel is available for support).

Pilot Program Types:

- Homeless

ID theft, making a mess, eating bad food, contamination

- Bear/ Wildlife/ Pests/ Rodents

making a mess, attracting bears to human residences/campgrounds, possible harm to wildlife

- Contamination

contamination costs and settings (public access in commercial districts, cafeterias, homeless populations)

- Wind or Weather

knocking over the carts and creating a mess, lids blown open
