

Sure-LOC™

The Smart Cart Lock

 **The SMART Cart Lock**

Wind-Resistant

Stays locked when tipped over—no more wind-blown debris.

Animal-Resistant

Two-step, knob-and-button operation keeps animals out.

"We placed the Sure-LOC™ at residences with bear issues and discovered it is enough of a deterrent that the bears are seeking other means of nourishment."

Pacific Northwest/ Canadian Southwest Hauler

When it comes to properly securing the waste, recycling, and organics streams with a plastic cart, a basic gravity lock just doesn't work. Only GravityPLUS™ does the complete job!

What is GravityPLUS™?

Knows the difference between getting knocked over and getting serviced.

Any basic gravity lock will fail when a plastic cart is knocked over because the gravity mechanism is designed to unlock when the cart is tipped. Our GravityPLUS™ technology overrides the gravity mechanism. The Sure-LOC™ keeps the container locked when knocked over — even off of a curb!

Knows how to perform in all directions.

Any basic gravity lock will fail to unlock when dumped sideways or backwards by an ASL, and will unlock when a cart is knocked forward, because the gravity mechanism is designed to function in only one direction. Our GravityPLUS™ technology is omni-directional. When dumped by an ASL, the Sure-LOC™ unlocks regardless of which way the container is facing. If the container is knocked over in any direction, the Sure-LOC™ stays locked.

Knows how to work under a load.

Any basic gravity lock will fail when a cart is overstuffed with debris or when trash falls against the lid during the dump cycle, because the gravity mechanism gets pinched due to the load being placed on the lid. Our GravityPLUS™ technology overcomes the load. The Sure-LOC™ is designed to "kick" the gravity mechanism into motion, even under a load.

Sure-LOC™

- 1 Easy One-Handed Operation**
Push button and turn knob.
- 2 Both Keyed & Button Options Available**
Keyed option provides additional security against scavengers and unauthorized users. Button option prevents animals from access.
- 3 Out of the Waste Stream**
No debris hanging up on or gumming up the mechanism.

Reduce Contamination of Recyclables

Protect Organics from Animals

Prevent Scavengers

Prevent Identity Theft

is the leading designer and manufacturer of automatic locks for waste containers. We develop cost-effective solutions that improve waste collection efficiency and safety. Since the introduction of our first gravity lock in 1988, our innovative products have helped our clients reduce cost, protect their employees, and build better relationships with their customers. As we expand into customized solutions for recycling, organics, and animal-resistant carts, we continue to provide the highest quality locking options in the industry.

Learn about our Pilot Program and how the Sure-LOC™ can be a part of your evolving sustainability program.
